2020-21

ABOUT THE COMPANY

IC Solution (ICS) is a digital service provider that aims to provide software, designing and marketing solutions to individuals and businesses. At ICS, we believe that service and quality is the key to success

We provide all kinds of technological and designing solutions from Billing Software to Web Designs or any custom demand that you may have. Experience the service like none other!

Some of our services include:

Development - We develop responsive, functional and super-fast websites.

We keep User Experience in mind while creating websites. A website should load quickly and should be accessible even on a small view-port and slow internet connection.

Mobile Application - We offer a wide range of professional Android, iOS& Hybrid app development services for our global clients, from a start up to a large enterprise.

Design - We offer professional Graphic design, Brochure design & Logo design. We are experts in crafting visual content to convey the right message to the customers.

Consultancy - We are here to provide you with expert advice on your design and development requirement.

Videos - We create a polished professional video that impresses your audience.

OVERVIEW OF THE PROJECT

Project Name : LEAFNOW

Team Members : supreetha G

Vinay Kumar H N

Nagashree T.P

Sagar Yadrami

Leaf Now is a user-friendly Application which is based on HTML and CSS which helps to the customers for various purposes like plants buying and selling etc. The application uses HTML and CSS as a front end for interacting with the user and PHP for connection. At backend we used MySQL for database.

Ever since industrialization started the care for plants has made it to our least priority list, Even though mankind requires plants to balance the food chain that he's a part of, but the plant enthusiasts are everywhere, be it big metropolitan cities or rural areas, so we aim to bring in a platform that can connect these plant/nature enthusiasts and help them exchange/sell them plants or donate seeds/plants as part of the green initiative that we started 2 years back.

Xampp Server

XAMPP is a free and open source cross platform web server solution stack package developed by Apache Friends, consisting mainly of the Apache HTTP Server, Maria DB database, and interpreters for scripts written in the PHP and Perl programming languages. XAMPP stands for Cross-Platform, Apache, Maria DB, PHP and Perl. It is a simple, lightweight Apache distribution that makes it extremely easy for developers to create a local web server for testing and deployment purposes. Since most actual web server deployments use the same components as XAMPP, it makes transitioning from a local test server to a live server

extremely easy as well. XAMPP's ease of deployment means a WAMP or LAMP stack can be installed quickly and simply on an operating system by a developer, with the advantage that common add-in applications such as Word Press and Joomla can also be installed with similar ease using Bitnami. Though it is a heavy app for most of the operating systems even when owing to its less size it takes a load on the processor.

INTRODUCTION

Our project is about leaf now. The leaf now includes supply & maintenance of plants which helps our environment to become pollution free. Leaf Now mainly includes following section:-

- Plants
- Lawn grass
- Water Lilly's
- Billing

Plants need extensive care and maintenance for their good growth and yield which is provided by nursery. Though very few people know about leafnow, now a day's leafnow becoming important designation.

Due to software management all the important procedure such as watering, fertilization, cutting will get easier and accurate than that of manual. Also we provide plant library which provides information about plants, their maintenance, plantation etc. So it can be referred easily.

Plants play important role in keeping environment pollution free and for our good health.

Therefore, well managed nursery will give us more advantage in this purpose.

SCOPE OF THE SYSTEM

The Scope of the Purchase & Sale control system is limited only for Leafnow.

This system helps the system for easy working.

This system is very user-friendly and makes the limited Interface of the user and hence makes the overall system Efficient and fast.

This system generates various reports such as, purchase report & stock report. It is totally the Menu-driven system.

NEED OF SYSTEM

- ✚ Using computerized system, time accuracy factor are considerably change.
- ✚ To make existing system user friendly.
- ✚ To reduce redundancy of data.

SYSTEM REQUIREMENTS

Hardware Requirements

The section of hardware configuration is an important task related to the software development insufficient random-access memory may affect adversely on the speed and efficiency of the entire system. The process should be powerful to handle the entire operations. The hard disk should have sufficient capacity to store the file and application

Processor: Intel PentiumT4200/ Intel Core Duo 2.0 GHz / more

RAM: Minimum 1GB RAM capacity

Hard disk: Minimum 40 GB ROM capacity Cache

Memory: L2-1 MB

GPU: Intel HD Graphics

Software Requirements

A major element in building a system is the section of compatible software since the software in the market is experiencing in geometric progression. Selected software should be acceptable by the firm and one user as well as it should be feasible for the system. This document gives a detailed description of the software requirement specification. The study of requirement specification is focused specially on the functioning of the system. It allows the developer or analyst to understand the system, function to be carried out the performance level to be obtained and corresponding interfaces to be established.

Front End: PHP (Hypertext preprocessor)

Back End: XAMPP server, My SQL

Operation System: Windows 7 Or Windows 8.1 Or Windows 10

Client side: CSS (cascading Style sheet)

SYSTEM IMPLEMENTATION

Implementation

Implementation is the stage in the project where the theoretical design is turned into a working system and is giving confidence on the new system for the users that it will work efficiently and effectively. It involves careful planning, investigation of the current system and its constraints on implementation, design of methods to achieve the changeover, an evaluation of change over methods. Implementation is the most important phase. The most critical stage in achieving a successful new system is giving the users confidence that the new system will work and be effective. Any system developed should be secured and protected against possible hazards. Security measures are provided to prevent unauthorized access of the database at various levels. Password protection and simple procedures to prevent the unauthorized access are provided to the users. The system allows the user to enter the system only through proper user name and password.

Create a connection to a database

Before you can access data in a database, you must create a connection to the database. In PHP, this is done with the getConnection() function.

```
<?php
$con=mysqli_connect("localhost","","root","","leafnow");
?>
```

Closing a Connection

The connection will be closed automatically when the script ends. To close the connection before, use the close() function:

```
<?php
mysqli_close($con);
?>
```

COMMON INDORE PLANT

Epipremnum Aureum Is A Species In The Arum Family Araceae, Native To Moorea In The Society Islands Of French Polynesia. The Species Is A Popular Houseplant In Temperate Regions But Has Also Become Naturalised In Tropical And Sub-Tropical Forests Worldwide, Including Northern South Africa, Australia, Southeast Asia, South Asia, The Pacific Islands And The West Indies, Where It Has Caused Severe Ecological Damage In Some Cases.

Importances Of Plant

SAVE TREES

Humans Depend On Plants In Numerous Ways. One Reason We Depend On Plants Is For Consumption. Plants Have The Unique Ability Of Producing Their Own Food Through A Process Called Photosynthesis. In This Process, Plants Are Able To Produce Macromolecules Such As Carbohydrates That Cannot Be Produced In Animals Or Humans. In Humans, The Only To Gain These Macromolecules Is To Consume Plant Matter, Or Consume Plant-Eating

Green Skill Development Programme

Support Lead

Green Skills Contribute To Preserving Or Restoring Environmental Quality For Sustainable Future And Include Jobs That Protect Ecosystems And Biodiversity, Reduce Energy And Minimize Waste And Pollution. In Line With The Skill India Mission Of Hon'ble Prime Minister, Ministry Of Environment, Forest & Climate Change (MoEF&CC) Utilising The Vast Network And Expertise Of ENVIS Hubs/RPs, Has Taken Up An Initiative For Skill

CONCLUSION AND FUTURE ENHANCEMENT

The Leaf Now database has been designed and developed using PHP where in many friendly from controls has been added. In order to make it, a user interactive application. The project has been subjected to testing and has been successful. The module has fulfilled all the objectives identified. The system is developed in such a way that the user with common knowledge of computers can handle it easily. The module has produced all the requirements produced by the user. The module has user friendly interface. The reports requested by the client have been generated and all documentation required for operation and maintenance of the module has been provided.

Future scope of the Project:

The Future Enhancement to the system can be made as technology changes. There is scope for future development in our project in terms of more functionality to add for this project. We can make android or iphone compatible application in the future. Online buying makes customers to sit anywhere and purchase the variety of plants to their homes. Face recognition security can be added in the future. In future we can grow greenary everywhere in the world. In future we can develop and integrate with mobile apps.
